Victoria Canada

I am an articulate Web Developer with excellent practical skills. I can code both the front and back end. Furthermore, I navigate in the UNIX and DevOps world regularly and I have a strong CS background.

Experience

Software Developer in Cloud, TC-Helicon - Jan 18/April 18

In support of iOS native applications, I have designed user registration Go micro-services and wrote documentation along highly scalable Cloud architecture utilising docker container orchestration.

Full Stack Web Developer, Freelance — July 12 / May 15 - May 16/ Jan 18

With over ten years experience designing and developing websites. Freelancing created a range of new opportunities allowing ideas to be born. Projects developed include; deployment management, shell scripting for automation, automating continuous integration, testing tools, event management API for native apps, HTML5 and CSS3, increasing knowledge with new programming languages and algorithmic thinking.

Senior Technical Support Engineer, Perforce Software — May 15/Feb 16

In-depth diagnosis of complex system problems involving Perforce and its numerous clients. Setting up test environments and virtual machines running Linux, Windows, UNIX, OS X and FreeBSD. Diagnosing network problems using standard tools as well as in-depth analysis. Writing scripts and programs both for supporting users and for in-house support tasks using streams and pipes to help automate configurations.

Technical Support, Ycd Software — Jul 09/Dec 09

As part of the tech team at YCD, I completed system builds and installation, delivery to customer location, wall displays tests and software tests prior to deployment, and performed system restore, upgrading, repairing, optimisation. When in lab I provided technical support via email and phone.

Technical Support, Waves Audio — Jul 06/Jan 08

Working at Waves as part of the tech team, I supported a wide user base with product authorization and helped with install and compatibility issues. While supporting clients over the phone, I explained how to use the products with attention to small detail and shared personal techniques, methods and workarounds for different production situations.

I provided both hardware & software technical support for clients, and training for new team members. While running around the office halls I coordinated between beta testers and QA team to promote needed fixes for future releases.

Skills

Ruby on Rails
Mern Stack / UX Design
SASS
ES6 / GraphQL
Git
Javascript
Integration
Node / Webpack
Distributed Systems / ReactJS
NodeJS
AWS / GCP / Heroku
Unix
Data Structures
MySQL
