Experience

FULL STACK WEB DEVELOPER, FREELANCE – 2011/PRESENT

With over ten years experience designing and developing websites. Freelancing created a range of new opportunities allowing ideas to be born. Projects developed include; deployment management and testing tools, event management API for iOS, Twitter API searching, CMS integration with Jekyll and Wordpress, SVG solutions for various visual formatting , and occasionally working on personal projects to increase knowledge with new programming languages.

SALES REP, MAPLIN ELECTRONICS UK – SEP 11/FEB 12

At Maplin I was responsible for explaining customers about wide range of catalogue products covering all aspects of usability, compatibility and maintainability. Managed delivery of electronics components from warehouse to store.

TECHNICAL SUPPORT, YCD MULTIMEDIA – JUL 09/DEC 09

As part of the tech team at YCD, I completed system builds and installation, delivery to customer location, wall displays tests and software tests prior to deployment, and performed system restore, upgrading, repairing, optimization. When in lab I provided technical support via email and phone.

TECHNICAL OFFICER, WAVES – JUL 06/JAN 08

Working at Waves as part of the tech team, I supported a wide user base with product authorization and helped with install and compatibility issues. While supporting clients over the phone, I explained how to use the products with attention to small detail and shared personal techniques, methods and workarounds for different production situations. I provided both hardware and software technical support for clients and training for new team members. While running around the office halls I coordinated between beta testers and QA team to promote needed fixes for future releases.

Profile

I am an articulate web developer & UI designer with excellent practical skills and a high level of commitment. My goal is to work in the tech industry achieving satisfaction, and I offer several years of experience.
